

Cybersecurity Incident Response Runbook - Rev 3.1

1. Incident Classification

Security events include credential leaks, unauthorized API token usage, and anomalous data extraction.

2. Mandatory Escalation Timelines

Any employee or contractor discovering a suspected credential leak, exposed token, or potential intrusion must report the incident to security-incident@cloudcorp.com within 1 hour of discovery.

Forensics, Evidence & Customer Notification - Page 2

3. Evidence Preservation

Impacted virtual instances must be immediately isolated at the VPC security group level.

Do NOT reboot compromised instances. Memory state and persistent logs must be cryptographically hashed.

4. Enterprise Client Notification Mandate

If confirmed customer data or metadata has been impacted, the Legal and Compliance team must formally notify affected enterprise clients within 72 hours of incident confirmation.
